

ABSTRACT OF THE DISCLOSURE

Digital camera is connected to personal computer via communication cable. When a user operates a key to delete any one of images recorded on memory card of the digital camera, digital camera requests personal  
5 computer to delete an image which links to the deleted image and is stored in personal computer. When receiving this command, personal computer deletes the image linked to the image deleted from digital camera.  
10 These processes ensure consistency between an original image stored in the digital camera and a copy image stored in the personal computer.
